

## Accellion Corporate Fact Sheet

Founded in 1999, Accellion, Inc. is the premier provider of on-demand secure file transfer appliance and data management solutions with an extensive customer base covering industries such as advertising/media production, legal, manufacturing, healthcare, consumer goods, higher education, and more.

Sending large files securely used to be an enterprise back office function performed by technical staff using tools such as FTP servers. Secure (large) file transfer has come to the forefront of enterprise usage for two key reasons. 1) With the ubiquity and acceptance of email and email attachments as part of many business processes, non-technical users are demanding a way to send large files (multimedia presentations, legal documents, etc.) not constrained by email attachment size limits. 2) Regulatory and compliance requirements such as HIPAA and Sarbanes Oxley (SOX) are requiring companies to institute auditable secure file transfer processes.

Accellion Secure File Transfer Solution allows internal and external users to send and receive files bi-directionally on the same platform without adding administrative overhead or infrastructure burden. Accellion solution offers an intuitive web interface with end-to-end file security and policy-based file lifecycle management. Secure file transfer solution also supports plug-in integration with Outlook and Lotus Notes email clients. For multi-site enterprises, Accellion offers clustering for multi-site load balancing, intelligent replication and failover.

Accellion is a privately held company headquartered in Palo Alto, California with offices in North America, Asia and Europe.
