

Accellion offers senior executives and other business professionals the most secure and productive way to access and share sensitive information on mobile devices. Whether it's board of director and executive presentations, contracts, or cash flow and finance projections, the Accellion kiteworks mobile app enables executives to access and share this sensitive information quickly and efficiently while meeting rigorous security standards to maintain compliance with industry regulations, even when on the road.

Instant Access to the Content That's Most Relevant to You

The **Home** view on the Accellion kiteworks mobile app provides executives with their favorite folders and most important files. They can designate frequently needed files for **offline** access and find other files on Accellion's secure file sharing platform quickly using the intuitive **Search** function.

The **Files** view provides access to other folders and files stored on the Accellion secure file sharing platform, without a VPN. These folders can be in an enterprise content management (ECM) system such as SharePoint, CIFS file shares on the corporate network, cloud storage such as OneDrive for Business, or Accellion's own kiteworks repository.

The **Viewer** allows executives to open and view Word, PowerPoint, Excel and PDF files. From there, depending on the administrator's security settings, it's easy to open the document in another app for editing.

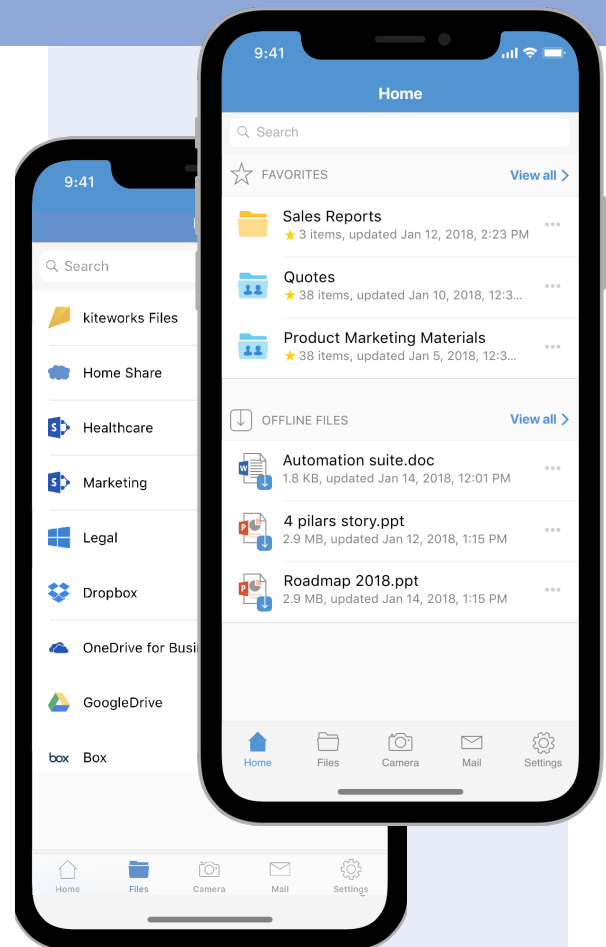

Secured by Accellion

The security and compliance capabilities in the Accellion secure file sharing platform that enterprises rely so heavily upon are the foundation of the Accellion kiteworks mobile app. These include:

- Automatic DLP scans on every file download
- Automatic AV and ATP scans on every file upload
- Encryption of content in transit and at rest; encryption key ownership
- Granular policy controls and logging of all file activity for compliance with HIPAA, GDPR, SOX, and other regulations
- Certified FIPS 140-2 compliant, FedRAMP-Authorized, and NIST 800-171 compliant
- Authentication and authorization enforced on the Accellion server

The Accellion kiteworks mobile app also provides an added layer of security to the device itself:

- Content stored for offline use is encrypted in the app's secure container, and does not intermingle with personal content on the device.
- Administrators can remote-wipe all enterprise content when the device is stolen or when the user leaves the organization but takes his/her device.
- Fast authentication using Touch ID is enabled.

"Accellion's new mobile app allows me to access all of the information I need as I travel around the world visiting customers and partners. All the documents I need are available in my favorite folders and it puts my mind at ease knowing all of the files I receive from my team are scanned for policy violations, viruses, and zero-day attacks to help keep us secure. And when I receive documents sent by customers through Dropbox, I can open them with the confidence that I'm not jeopardizing our network."

- Mike Polatsek, Chairman and CEO, CybeReady

Edit Seamlessly in Microsoft Office 365

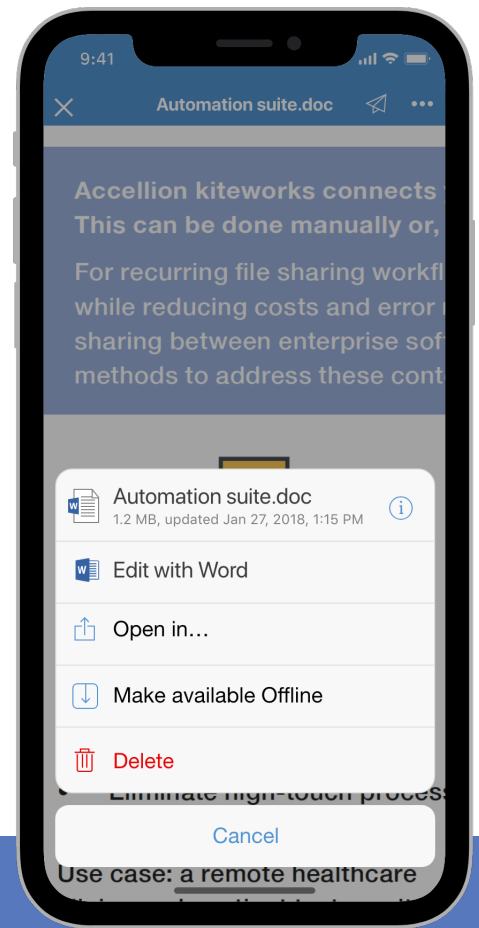

Leverage Microsoft's dominant Word, PowerPoint and Excel apps for mobile editing. An executive can choose to edit in one of these programs, and changes are automatically saved to the same folder.

Share Securely in Just a Few Clicks

Even when collaborating on the road, an executive can share content easily with colleagues, partners and customers. He or she can invite members to collaborate on files in a shared folder and manage their permissions, or send a secure attachment via email. Documents can be shared from any connected repository, as well as from the device itself, and the contacts conveniently auto-fill from both LDAP/AD and the device.

Secure Sensitive Photos in Seconds

Using the Express Secure Camera, it takes only a few clicks to securely grab photos of documents, inspection details, and clinical cases. The photo is automatically uploaded and saved to the Accellion secure file sharing platform, bypassing the device's camera roll. Even when offline, photos are segregated in the app's secure container.

Key Features

Phones and Tablets Supported

- iOS 9 and above
- Android 4.4 and above

Productivity

- Access to all kiteworks-connected repositories
- No VPN needed
- Browse, favorites, full text search
- Send files via secure email
- Manage access to shared folders
- File offline access – user-pull and manager-push
- Express Secure Photo

Viewing and Editing

- Built-in viewer for Microsoft Office, PDFs, images and videos
- Seamless iOS editing in Microsoft Office (Microsoft WOPI protocol)
- Open-In to edit in any white-listed app

Security

- Built on kiteworks system-wide compliance and security
- Secure container with AES 256 encryption and remote wipe
- Encrypted HTTPS/TLS connection to kiteworks server
- RADIUS 2FA/MFA, native OTP-based 2FA, OAUTH
- Admin white-listing of helper applications

Availability and Licensing

The Accellion kiteworks mobile app is available for free in the Apple App Store and Google Play Store. The user must have login access to a live Accellion kiteworks system, which can be in production, test or trial.

Download the mobile app from the App Store/Google Play Store and try it out against your kiteworks system or trial

Accellion, Inc. enables enterprise organizations to securely connect all their content to the people and systems that are part of their critical business processes, regardless of the applications that create that content or where it is stored, while maintaining the controls and visibility needed to demonstrate compliance. Accellion's solutions have been used by more than 25 million end users and have been installed at more than 3,000 of the world's leading corporations and government agencies including NYC Health + Hospitals; KPMG; Kaiser Permanente; Latham & Watkins; National Park Service; Umpqua Bank; Cargill; and the National Institute for Standards and Technology (NIST).
